Sophos Central

Extending protection beyond the endpoint.
Switching to Sophos Central.

More UK Public Sector organisations are switching to Sophos Central to manage and maintain their organisation's IT security from a single console.

As a leading supplier to the Public Sector, Sophos Central helps organisations to secure and control their IT infrastructure and data – simply and effectively.

15% of Sophos Public Sector clients have already made the simple switch from on-premise to cloud.

Isn’t it time you made the simple switch to Sophos Central?
Security made simple.

Increased levels of sophisticated cyber-attacks have been plaguing Public Sector organisations, increasing the need to address and improve IT security. Modern networks and IT demands continue to get more complex, but your IT security doesn’t have to.

With Sophos Central, you get a single up-to-date, Sophos-hosted platform that’s simple and intuitive. Now you can create policies that apply to an individual and not just the device. With all your devices in a single location, you can correlate alerts to allow security decisions to be taken automatically.

So, if you’re looking to switch to IT security that gives you more visibility and less vulnerability, discover how Sophos Central can work for you.

Introducing Sophos Central

Discover how Sophos makes security simple
More visibility.

With Sophos Central, we’re making it simpler than ever for Public Sector organisations to have unprecedented visibility of all their users’ devices, on or off their network. So you can confidently embrace BYOD and support and protect a wide range of user devices.

**Sophos Central offers web-based access to a unified console with policies that follow users across devices and platforms.** That means your organisation’s IT admin can check on remote workers on their laptops or mobile devices in one easy view. Plus, it’s easy to find and block threats and even clean up infections without the need to travel.

- Discover how to manage your end-user security from anywhere
- Discover how to manage sub estates and share licences
- Discover Sophos Central
Less vulnerability.

Benefit from less admin as your endpoints, servers, appliances and devices check in directly with Sophos Central to receive, send and share contextual security intelligence. Sensible default policies and point-and-click functionality help you quickly deploy protection, and an intuitive, easy-to-use dashboard provides great visibility of your environment and quick access to routine administrative tasks.

Simplify your life with a single pane-of-glass to manage your endpoints and more. Built using an adaptive design, the layout automatically optimises for your screen size. We’ve optimised all the workflow routines, not only making them intuitive, but also streamlining the experience, keeping you on top of security wherever you are.

Sophos Central Datasheet
Migrating to Sophos Central.

If you’re using Sophos Enterprise Console to manage Sophos Endpoint Protection, perhaps it’s time to consider a switch to Sophos Central. You won’t even need to run a server to manage your security anymore.

Featuring a streamlined design, next-generation protection, simplified reporting, and a robust dashboard, Sophos Central Admin is the most powerful and easy to use solution on the market today.
